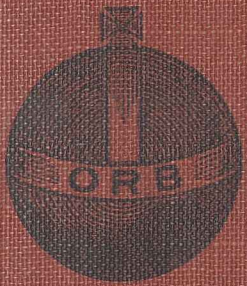
A HANDBOOK OF USEFUL INFORMATION



FIFTEENTH EDITION

(WITH APPENDIX)

With the Compliments of

JOHN LYSAGHT (Aust.) LTD.

PLEASE READ THIS.

Galvanized Iron

"ORB" CORRUGATED.

"QUEEN'S HEAD" PLAIN.

Manufactured at Newcastle (New South Wales).

Your attention is specially drawn to the fact that John Lysaght (Australia) Limited are manufacturing "ORB" Galvanized Corrugated, "Queen's Head" and "Fleur-de-lis" Galvanized Plain Iron at Newcastle (N.S.W.)

These works are of the most modern type, and equipped with the very best and latest Sheet Rolling and Galvanizing Machinery, whilst the same care and close attention are devoted to the manufacture of the locally made sheets as in the English works. The makers can, therefore, confidently guarantee that the quality of the Newcastle Sheets is equal to that of the same well-known brands of John Lysaght Ltd., Bristol (Eng.), which are the standard for quality throughout the world.

Every sheet of LYSAGHT'S "ORB," "QUEEN'S HEAD" and "FLEUR-DE-LIS" Iron is branded and guaranteed, and sheets of Australian manufacture have the word "AUSTRALIA" under the brand.

PLEASE NOTE!

That Lysaght's Galvanised Plain and Corrugated Iron, and Black Sheets, are stocked by all the leading Ironmongers, Timber Merchants and Storekeepers throughout the Commonwealth, from whom current prices can always be obtained upon application.

Further copies of this Publication may be obtained post free, upon application at any of the Offices of JOHN LYSAGHT (Australia) LTD., in the various Capital Cities of the Commonwealth.

THE REFEREE

15TH EDITION

BEING

A GENERAL GUIDE FOR IRONWORKERS, STOREKEEPERS, COUNTRY RESIDENTS, &c.

CONTAINING

TABLES OF WEIGHTS, MEASUREMENTS, AVERAGE RAINFALL, POSTAL AND OTHER USEFUL INFORMATION

Revised June, 1927. *Copyright.*

Whether made in England or Australia, every detail of the manufacture of LYSAGHT'S SHEETS receives the same careful scrutiny as has served to gain world-wide recognition of their reliability for over seventy years.

The various tables contained herein have been carefully compiled from existing sources of information. No responsibility is accepted, and no originality is claimed in respect thereof. They are intended to give closely approximate information which may not always be readily accessible elsewhere.

The Publisher will be thankful to receive suggestions for further improvements or to have pointed out any printer's or other errors which may have inadvertently crept in. Communications may be addressed to Box 196 D, G.P.O., Sydney.

The Evolution of Galvanized Iron

IT is interesting to note at the present day, when the use of Galvanized Iron has become so widely extended, that its introduction dates back only to 1837. Although a plain sheet was exhibited at the Great Exhibition in 1851, it was not until the application of steam power for the purpose of corrugating was brought about in 1854, that Galvanized Iron really came into practical use.

In 1857 the celebrated "ORB" Brand was first manufactured by Mr. JOHN LYSAGHT.

During the seventy years that have since elapsed, greatly improved methods for its production, and extreme care displayed in its manufacture, have secured for **LYSAGHT'S GALVANIZED IRON** an unrivalled reputation throughout the world, and so universally has it been adopted to meet the needs of modern civilization, that it may with truth be said that the sun is always shining on "ORB" IRON.

We are pleased to record that the major portion of the heavy sheets of "Elephant Iron," and the more familiar corrugated curved sheets so extensively used for roofing Hutments and Dug-outs on the Western and other Fronts during the Great War were manufactured by Messrs. John Lysaght Limited, of Bristol, Newport and Scunthorpe (Eng.).

LYSAGHT'S TRADE MARKS

LYSAGHT "ORB"

GALVANIZED CORRUGATED IRON

is favourably known and used throughout the world. Its uniformly reliable character is recognised by consumers everywhere. There are many imitations, but to those who compare its covering capacity with other nominally cheaper brands, its superiority in all respects is at once apparent.

LYSAGHT "ORB" BLUE

The highest grade of Tankmaking Sheets available. (Manufactured in England).

Specially recommended for use under exacting climatic conditions or where the water possesses mineral properties detrimental to the life of ordinary sheets.

LYSAGHT "GUINEA"

A superior sheet, manufactured in England and Australia, second only to "Orb" in quality and appearance.

Recommended for use when price is a consideration.

LYSAGHT "QUEEN'S HEAD"

GALVANIZED TINNED SPECIAL FLAT SHEETS, manufactured in England and Australia.

This brand will stand the severest tests, and commands the confidence of iron-workers everywhere.

"FLEUR-DE-LIS"

GALVANIZED TINNED FLAT SHEETS,

manufactured in England and Australia, enter largely into consumption in the lighter gauges, for that class of work in which a somewhat cheaper sheet is asked for. It will be found equal to all such requirements.

NOTE.—When Sheets of the above brands are of Australian manufacture, the word "AUSTRALIA" is stencilled in blue under the brand on every Sheet.

BLACK SHEETS—See pages 19 to 23.

When Requiring Corrugated Iron
ask for—

Lysaght's Australian Orb

IT IS EQUAL to the best imported Brands of English Manufacture.

IT IS made in **AUSTRALIA** from Australian Raw Materials.

IT IS true to gauge and contains the standard number of sheets per case.

EVERY SHEET GUARANTEED

Registered Trade Mark.

Branded in Blue on every Sheet.

EVERY SHEET GUARANTEED

IT IS packed in 10-cwt. felt-lined cases.

IT IS Standard 3in. corrugations, with $\frac{3}{4}$in. pitch, and corrugates evenly throughout.

IT IS approved and recommended by leading Architects.

ASK FOR

Lysaght's Australian Orb

and assist Local Industry

Sections of LYSAGHT'S Galvanized Sheets

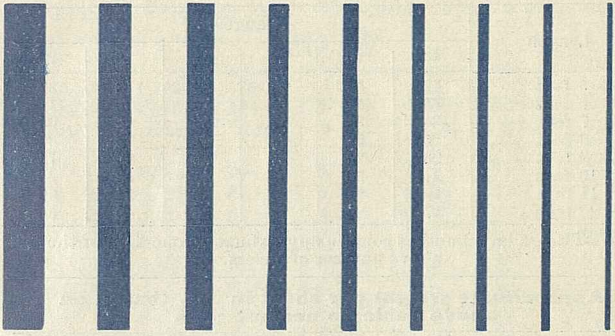

Illustration showing the approximate thickness of Plain Sheets, according to the respective gauges. (See page 39).

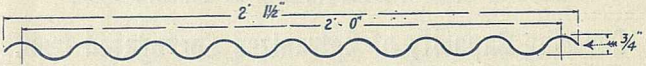

The "ORB" Standard for Roofing Sheets, eight 3-inch corrugations of ¾-inch pitch.

The "ORB" Standard 1-inch corrugations of ¼-inch pitch, used extensively for Ceilings, Linings, Bath Screens, etc.

For further useful information on Galvanized Sheets, see letterpress on pages 3, 12 and 35.

Galvanized Iron—Corrugated.

Approximate number of sheets to a case (ordinary Corrugations) weighing about 10 cwt.

Length	Gauges.					
	18	20	22	24	26	28
5 feet	42	53	66	83	118	132
6 feet	35	44	55	69	98	111
7 feet	30	38	47	59	84	95
8 feet	26	33	41	51	73	83
9 feet	23	29	36	45	65	74
10 feet	21	26	33	41	58	66
11 feet	19	24	30	38	54	62
12 feet	17	22	28	35	49	56

NOTE :—2 cwt. bundles contain approximately one-fifth of the above number of sheets.

Approximate weight per sheet in lbs. (based on above table to nearest ½lb).

Gauge	5 ft.	6 ft.	7 ft.	8 ft.	9 ft.	10 ft.	11 ft.	12 ft.
18	26½	32	37½	43	49	53	58½	64 lbs.
20	21	25½	29½	34	38½	43	46½	51 ,,
22	17	20¼	24	27¼	31	34	37¼	40½ ,,
24	13½	16¼	19	22	25	27¼	29¾	32½ ,,
26	9½	11½	13½	15½	17¼	19½	20¾	23 ,,
28	8½	10	11¾	13½	15¼	17	18¼	20 ,,

Cases of LYSAGHT'S Brands of Corrugated Iron usually contain sheets in excess of the numbers given in above tables.

Covering Capacity of Galvanized Corrugated Iron.

One Ton of Galvanized Corrugated Iron has the following approximate covering capacity:—

	24g. 3in. Cor.	26g. 3in. Cor.	26g. 1 in. Cor.	28g. 1 in. Cor.
Single Lap	1,600 sq. ft.	2,200 sq. ft.	2,327 sq. ft.	2,645 sq. ft.
Lap and half	—	2,000 ,,	—	—
Double Lap	1,400 ,,	1,900 ,,	2,230 ,,	2,535 ,,

NOTE.—To ascertain the number of squares (10 ft. x 10 ft.) divide by 100.

To ascertain cost per square divide price per ton by number of squares.

SPRING HEAD NAILS.

One packet (100 nails) is usually allowed to one square of roofing.

Galvanized Iron—Corrugated

Approximate price per sheet (to nearest half-penny) based on given rates per ton. This table is not a price list.

The Life of a Galvanized Sheet is Dependent

upon the weight and perfection of its **Zinc Coating.** This fact is universally acknowledged by scientists, and is not controvertible.

Claims have been advanced that the life of a galvanized sheet is affected by the material upon which the zinc coating is deposited. These claims cannot be sustained. So long as the coating remains unimpaired, **corrosion cannot take place.**

Lysaght's Orb and **Queen's Head Brands** hold the premier position for **perfection of galvanizing,** and the **life** of these sheets is **guaranteed.**

Galvanized Iron—Plain.

Approximate number of 6 ft. sheets to a case of Plain Iron averaging about 10 cwt.

Cases of Lysaght's Brands of Plain Galvanized Iron usually contain sheets in excess of the number given in the above tables.

LYSAGHT'S "Queen's Head" Special Flat Plain Galvanized Iron is a High-grade Sheet of exceptional finish.

It will stand the severest tests, and commands the confidence of Iron-workers everywhere.

LYSAGHT'S "Fleur-de-Lis" Plain Iron is largely used for the manufacture of lighter classes of guttering, down pipe, ridging, etc., its smoothness of surface and freedom from buckle being conspicuous features.

LYSAGHT'S BRANDS of Plain Iron are obtainable to order in any gauge in sheets up to 12 feet long and 56 inches wide, subject to a maximum area of 48 square feet.

Galvanized Iron—Plain.

Price per ton—how much per lb?

A SIMPLE METHOD OF ARRIVING AT THIS.

EXAMPLE—1 ton £28
Divided by 7 4
„ „ 4 1

Deduct last two numbers .. .. 3 pence per lb.
Or—1 ton £100
Divided by 7 .. .. 14.285
„ „ 4 .. .. 3.571

Deduct last two numbers .. .. 10.714 pence per lb.
Or conversely—Price per lb., 3d.—how much per ton?

3
Multiplied by 9 1/3rd

£28 per ton

ANOTHER VERY SIMPLE METHOD.

4¾d. per lb.—how much per ton?
Bring to farthings, and multiply by 7 and divide by 3.
19 × 7 = 133 ÷ 3 = £44/6/8 per ton.

This applies to any sum, providing it is brought to farthings.

Also the reverse:—
£48/15 per ton, how much per lb.?
48.75 × 3 = 146.25 ÷ 7 = 20.892 ÷ 4= 5.223d. per lb.

TO FIND THE VALUE OF A GIVEN WEIGHT AT A GIVEN PRICE PER TON.

	Tons	Cwt.	Qr.	Lbs.	
Example—	2	10	1	18 at	£5/10/- per ton.

Reckon the tons as pounds; cwts. as shillings; each qr. 3d., and for every 9lbs. 1d., equals—
£2 10 5 multiplied by the price
per ton = 5½ pounds sterling.

£12 12 1
1 5 2½

£13 17 3½ Answer.

TO FIND THE PREMIUM OR DISCOUNT OF ANY SUM.

Example— £24/10/6 at 3½ per cent.

Multiply the sum named by double the rate per cent., and point off the product one to the right.

£24 10 6
Double 3½ per cent. = 7

£17.1 13 6 Answer, 17 1/10th of a Shilling, say, 17/2.

Black Sheets

The uniform "Blued" finish and general excellence of quality of

LYSAGHT'S

C.R.C.A. Patent Flattened

"SOUTHERN CROSS" Black Sheets

makes them particularly suitable for general manufacturing purposes and for work of a special nature.

For less important work, and when price is the primary consideration, we recommend

LYSAGHT'S

"SUNSTAR" Brand

These Sheets are C.R.C.A., true to gauge and dead flat.

LYSAGHT'S

NEWCASTLE C.R.C.A. BLACK SHEETS.
(manufactured in Australia)

will be found to give every satisfaction for general working-up purposes.

Special qualities are prepared and are being successfully used for:—

DEEP DRAWING, TINNING, VITREOUS ENAMELLING, and MOTOR BODY WORK.

The above qualities are rolled in 10 to 30 gauge, in lengths up to 12 feet, and in widths up to 56 inches (Newcastle sheets, 38 inches), and are stocked in sizes:—6ft. x 24in., 30in. and 36in. wide, in 10 to 30 gauge.

Iron—Black Sheet.

Weight and Thickness.

Gauge	Lbs. per square foot	Thickness inches	Thickness mm	Gauge	Lbs. per square foot	Thickness inches	Thickness mm
3/16	7.50	.1874	4.770	19	1.76	.0440	1.118
8	6.28	.1570	3.988	20	1.56	.0392	.996
9	5.59	.1398	3.551	21	1.39	.0349	.886
10	5.00	.1250	3.175	22	1.25	.0312	.794
11	4.45	.1113	2.827	23	1.11	.0278	.707
12	3.96	.0991	2.517	24	.99	.0247	.629
13	3.52	.0882	2.240	25	.88	.0220	.560
14	3.14	.0785	1.994	26	.78	.0196	.498
15	2.79	.0699	1.775	27	.69	.0174	.443
16	2.50	.0625	1.587	28	.62	.0156	.396
17	2.22	.0556	1.412	29	.55	.0139	.353
18	1.98	.0495	1.257	30	.50	.0124	.315

On the above basis, the approximate Number of Sheets 6ft. long in One Ton of Black Sheet Iron is as follows:—

Gauge	WIDTH		
	24in.	30in.	36in.
10g	37	29	24
12	47	37	31
14	59	47	39
16	74	59	49
18	94	75	62
20	119	95	79
22	149	119	99
24	188	150	125
26	239	191	159
27	270	216	180
28	301	241	200
30	373	298	248

Weight of Steel is about 2 per cent. more than Iron.

equal to the best imported.

Lysaght's Black Sheets

Descriptive List of Qualities in most General Use

For Newcastle Works Qualities see page 19.

Quality.

No. A1.—"**Queen's Head.**"—A high-grade quality of C.R.C.A. Sheets, extensively used for special work.

No. 1.—"**Southern Cross.**"—An excellent quality of C.R.C.A. Mild Steel Sheets, suitable for all ordinary working-up purposes, well and favourably known by sheet-metal workers throughout the Commonwealth.

No. 1a.—"**Sunstar.**"—A good C.R.C.A. Sheet, dead flat and specially manufactured for those purposes where price prevents our higher grade sheets being used.

No. 3.—**Deep Stamping Best Pickled C.R.C.A.**—Suitable for severe stamping or spinning.

No. 4.—**Best Bright Polished Steel Sheets.**—This quality has a smooth, polished, bright surface. The sheets are flattened and resheared true and square.

No. 9.—**Railway Waggon Body Sheets.**—These are supplied very largely for making covered railway goods waggons. The sheets are finished dead flat, and resheared exact to required dimensions.

No. 11.—**Superior Charcoal Finish Panel Plates for Railway Carriages, etc.** (see page 89).

No. 13.—**Copper Soft Steel Sheets C.R.C.A.**—This is an extra soft quality, specially prepared for beating and stamping. It is very suitable for blocking for ships' ventilators or any similar purpose.

No. 14.—"**LYCO.**"—**Enamelling Quality.**—Special pickled steel sheets for vitreous enamelling.

No. 21a.—**Best Bright Tinning Finish.**—For making large tinned sheets, special articles and hollow-ware that require tinning after manufacture.

DESCRIPTIVE LIST OF QUALITIES.—Continued.

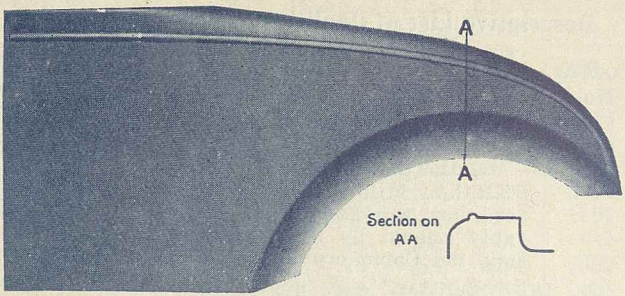

Illustration showing the working quality of our "Auto D.D." Sheets.

Quality.

No. 22a.—Auto D.D. Motor Body Sheets are a quality specially prepared for all varieties of Press Work and Stampings employed in modern body mass-production methods. The surface is free from wave, buckle, and scale, and is particularly suitable for the direct application of "DUCO" and similar finishes.

No. 22.—Auto Quality similar in finish to **Quality No. 22a.**, but prepared dead flat, and intended for use in flat panelling, etc. Its special feature is the superior finish obtained with the "DUCO" process.

No. 25.—Special Motor Body Sheets, of superior finish, with smooth, clean surface, silver-bright, and with good working-up capability. Used by leading motor body builders on the Continent, Great Britain and Australia.

ELECTRICAL SHEETS.—The manufacture of these sheets is carried out on the most highly developed lines. The Department is equipped with all necessary apparatus for the production of the best qualities, and for carrying out tests. **All sheets are supplied to definite guarantees as to Watts' Loss.**

"Stalloy" High Resistance Transformer Sheets and **"Lohy's" Special Dynamo Sheets** can be supplied to special order.

All the above qualities are obtainable in all gauges from 10-g to 30-g and in widths up to 56 inches.

beautiful appearance. It's bright and it lasts!

LYSAGHT'S MOTOR BODY SHEETS

Q 22 A AUTO DEEP DRAWING

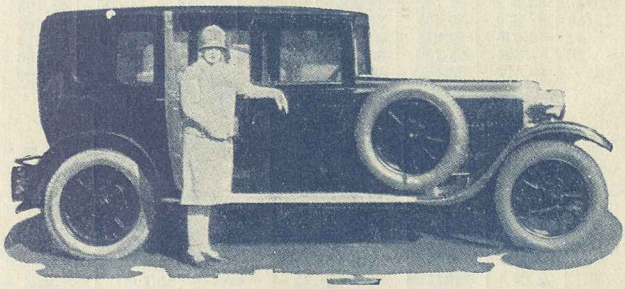
Q 22 AUTO QUALITY

Specially prepared for use with "DUCO."

Q 25 SILVER BRIGHT FINISH

USED EXCLUSIVELY BY

Leading Continental and Australian Body Builders.



Factory Costs show that the extra price of these Sheets is recouped by the economy effected in

"WORKING-UP" and "FILLING."

Stocked in 20 and 22 gauge, 6, 7, and 8 feet long 24, 30 and 36 inches wide.

OTHER GAUGES AND SIZES ROLLED TO ORDER.

EXPANSION OF METAL

A comparison between the common metals at 32 degrees Fahr. and 212 degrees Fahr. showed the following results:—

Lead expands	1	part in	349	Block Tin expands	1	part in	403
Zinc ,,	1	,,	322	Cast Iron ,,	1	,,	901
Copper ,,	1	,,	581	Wrought Iron ,,	1	,,	846
				Brass ,,	1	,,	584

It will be observed that in expansiveness lead is only beaten by zinc.

Fusing Temperature of Metals

	Degrees Fahr.		
Solder	330	Brass	1650
Tin	426	Silver	1830
Lead	630	Copper	2192
Zinc	800	Gold	2280
		Cast Iron	2912

SIZES of PIPES for WATER

The table below gives approximately suitable diameters of pipes for passing different quantities of water. For short mains up to 200 yards long, the diameter of same, if smaller than the figures given, is not of much importance, but when they exceed 200 yds. in length the diameters given in this table are desirable.

Gallons per minute.	Diameter of pipe in in.	Gallons per minute.	Diameter of pipe in in.

2 ft. 8 in. sq.	100 gall.
3 ,, 3 ,, ,,	200 ,,
3 ,, 8 ,, ,,	300 ,,
4 ,, 0 ,, ,,	400 ,,

WATER.

1 pint pure water weighs 1¼lb.
1 gallon pure water contains 277·274 cubic ins.
1 cubic ft. distilled water, 62 deg. Fahr., weighs 62·321 lbs.
1 cubic yard distilled water, 62 deg. Fahr., weighs ¾ ton.
1 cubic fathom distilled water, 62 deg. Fahr., weighs 6 tons.

To Compute the Capacity of a Tank

SQUARE OR RECTANGULAR.—Multiply the length by the breadth and the product by the depth; the result multiplied by 6¼ (6.2321) will give the base and contents in gallons.

CIRCULAR.—Rule A—Multiply the circumference by itself and the product by half the height.

Example:—Circumference 20 ft., height 6 ft.
20 ft. x 20 ft. x 3 ft. 1,200 gals. approximate capacity.

Rule B.—Multiply the diameter by itself and the product by five times the height.

Example:—Diameter 6 ft., height 6 ft.
6 ft. x 6 ft. x 30 ft. = 1,080 gals. approximate capacity.

A GOOD TANK

It is highly necessary that a **Corrugated Iron Tank** should possess lasting properties, and adaptability to withstand the climatic conditions of the locality in which it is to be used.

Thousands of TANKS are made every year from Lysaght's Corrugated "ORB" Sheets, the durable properties of which, in a pure dry atmosphere remote from the sea, are almost unlimited.

In tropical countries and other localities in which the water possesses mineral properties, the result is, however, less satisfactory, and in such cases Tanks should be made from **Lysaght's Special Blue Tank-Making Sheets**, which are largely used for this purpose in India and other tropical countries.

Stocks of these Sheets are available throughout Australia.

What Good Galvanizing Means

As the strength of a chain is that of its weakest link, so the life of a *galvanized sheet* depends upon the uniformity of its *zinc coating;* the smallest ungalvanized spot weakens the life of the whole sheet.

So far as durability is concerned, the base of the galvanized sheet is immaterial. *Pure Iron, Charcoal Iron* or *Steel* will all perish quickly when the coating is destroyed.

Lysaght's Orb and Queen's Head Brands are by common consent the *most perfect* and *heavily coated sheets manufactured,* and will therefore outlast any other make.

All Australian

This huge tank is made from
18 Gauge Orb

*This Gauge (B.G.) is the customary commercial gauge for Iron and Steel Sheets, whether Black, Galvanized or tinned. It is sometimes erroneously referred to as the Birmingham Wire Gauge (B.W.G.), but the latter is a different gauge.

It is useful to remember that 10 B.G. is ⅛in., 16 B.G. is 1/16 in., and that for every addition of 6 to the gauge number, the thickness is halved.

To Fix Selling Price of Goods

Useful Information for Small Traders and others whose business does not justify the installation of a Special Costing System.

The Costing of goods upon a scientific basis is highly necessary in any business, large or small, and many instances have been known of business failure through lack of knowledge upon this vital point.

In fixing price to be charged for the goods sold, the first step to be taken is to ascertain the overhead expenses (i.e., rent, rates and taxes, wages, salaries and all expenses, except the cost of the goods), and when this amount has been ascertained see what percentage it bears to the annual turnover, then add to this the amount of nett profit desired to be made and the combined total is the gross profit on sales that should be secured.

Take, for instance, the case of a Country Storekeeper who has a capital of £6,000 invested in a business, with a turnover of £30,000 per annum. If, for instance, he desires to make 20 per cent. on his capital, say £1,200 per annum, and has overhead expenses amounting to £3,000 per annum, he requires to make a gross profit of £4,200 per annum upon a turnover of £30,000 to provide all his expenses and to give the desired return upon his capital.

The proportion that £4,200 bears to turnover £30,000 is exactly 14 per cent., which is the required amount of gross profit to be made on sales.

The amount, however, to be added to the cost price of the goods is **not 14 per cent., but 16⅔ per cent.**, i.e.,

for example:—

Adding 14 per cent.				**Adding 16⅔ per cent.**			
Cost price	£100	0	0	Cost price	£100	0	0
Add 14 per cent.	14	0	0	Add 16⅔ per cent.	16	6	8
Selling price ..	£114	0	0	Selling price ..	£116	6	8
Deduct cost ..	100	0	0	Deduct cost ..	100	0	0
Gross profit ..	£14	0	0	Gross profit ..	£16	6	8

£14 profit on selling price £114 gives gross profit 12.29 per cent., but £16/6/8 profit on selling price £116/6/8 gives gross profit 14.01 per cent.

The 14 per cent. gross profit is merely given as an illustration of the working of the system, the actual amount required to be added is, of course, a matter for each individual trader to determine, and would be dependent upon the following considerations:—

(1) Volume of Annual Turnover.

(2) Cash or "Credit" Sales.

(3) Nature of business, where located, whether a luxury trade on which good profits might be expected or whether dealing with the supply of necessary commodities on which the profits would naturally be upon a much smaller scale.

(4) Local competition.

(5) The existence of any price fixing regulations or price maintenance conditions of sale on the part of manufacturers of proprietary lines, etc.

The following table will show the amount to be added to the cost price of goods to secure the percentage of gross profit required, viz:—

Gross Profit Required.	Add to Cost Price.	Selling Price of Goods costing £1.
		£ s. d.

GUEST, KEEN & NETTLEFOLDS LTD.

CARDIFF WORKS

MANUFACTURERS OF

STEEL PLATES, ETC.

The finished products of these works are Steel Plates of every description, ¼in. TO 2in. THICK, from

OPEN HEARTH STEEL

ACID AND BASIC

of Boiler, Tank, Bridge and Ship Quality.

All Plates supplied to meet the requirements of

British Standard Specifications,

and subject to the tests of

Lloyd's Registry — British Corporation

Board of Trade — Bureau Veritas

British Admiralty — Boiler Insurance Corporation

Sole Distributing Agents throughout Australia:

JOHN LYSAGHT (AUST.) LTD.

SYDNEY, MELBOURNE, ADELAIDE, BRISBANE, PERTH

PRICES

JOHN LYSAGHT (Australia) LIMITED

will be pleased to quote upon application for any specifications on—

(a) C.I.F.E. BASIS,

(b) F.O.B. ENGLISH PORT,

subject to the usual extras, and will also, if desired, quote an OVERHEAD PRICE.

Maximum Dimension of Steel Plates that can be rolled, subject to Special Arrangements, and to Extras as per our List.

Thickness of plate (Inches)	Length (Feet)	Width (Inches)	Area (Sq. feet)	Remarks.
.25 to under .30	33	72	145	
.30 „ .35	33	76	160	
.35 „ .40	36	70	185	
.40 „ .45	40	90	210	
.45 „ .50	50	90	230	
.50 „ .60	50	96	250

CENTRE STRAND—3 inch and 4 inch NETTING—17 and 16 gauge, 1/9; 15 gauge, 2/-; 14 and 13 gauge, 2/3; 12 gauge, 3/- extra per 50 yard roll gross. WIDTHS UNDER 12 inch are charged as 12 inch, INTERMEDIATE WIDTHS are charged the same rate as the next greater width up to 4 feet wide. INTERMEDIATE WIDTHS over 4 feet are charged by steps of 6 inches, viz:—54 inch at the mean between 48 inch and 60 inch, 56 inches would be charged as 60 inches. This applies to both ordinary and Sheep Netting.

NOTE.—A Special Tariff is issued from time to time for Rabbit-proof Sizes.

LYSAGHT'S Australian Iron is

3 TWIST—2 inch MESH NETTING

LYSAGHT BROS. & CO. LTD. are now making this Netting in all Listed gauges and widths with 3 twist meshes in place of the ordinary 2 twist.

Whilst their well-known standard quality Netting meets all ordinary requirements, any buyer preferring the additional rigidity given by the extra twist can obtain same from all Distributors at the prices shewn hereunder:—

Iron Wire is 2 per cent. less than steel.

SOMETHING ABOUT WALLPAPERS

EFFECT OF COLOUR ON LIGHT.

The question is often asked "What is the best colour for Wallpapers or Hangings?" The following Table will give the fullest particulars. Common Wallpapers tested in an Illuminating Laboratory for the light-absorbing qualities have given the following results:—

Colour of Wallpaper.	Percentage of Light absorbed.	Colour of Wallpaper.	Percentage of Light absorbed.
White	30	Emerald Green ..	82
Chrome Yellow ..	38	Dark Brown ..	87
Orange	50	Vermilion ..	88
Plain Deal ..	55	Blue-green ..	88
Yellow	60	Cobalt Blue ..	88
Light Pink ..	64	Deep Chocolate ..	96

This Table shows that if a room papered with dark green be repapered with Chrome Yellow, it will be four times as light with the same lamps and windows. In many cases householders pay too much for electricity and gas lighting because their light-absorbing wall coverings destroy the light rays.

Wallpaper is made in rolls 12 yards long, 21 inches wide.

APPROXIMATE SCALE FOR CALCULATING THE MEASUREMENT OF A WALL FOR WALL COVERINGS.

Quantity Guide for Wallpapers.

Measurement Around the Room.	Height of Picture Rail or Ceiling.

TO BUILDERS AND CONTRACTORS

BRICKWORK.

3800 9 x 4½ x 3 Bricks will build a rod of Brickwork.

816 sup. ft. of a 4½-inch Brick
408 „ „ 9 „ „
272 „ „ 14 „ „
204 „ „ 18 „ „
163 „ „ 22½ „ „

} Will make a rod of Brickwork.

A rod of Brickwork contains 306 cubic feet.
1000 Fire Bricks weigh 3 tons 5 cwt. to 3 tons 7 cwt.
1000 Ordinary Bricks weigh 3 tons 15 cwt. to 4 tons.
About 5 casks Cement are required to build a rod of Brickwork, 3 parts of Sand to 1 of Cement; 7 casks if 2 of Sand to 1 of Cement.
About 3½ bags of Lime will build 1 rod of Brickwork.
A cubic yard of Sydney Sand weighs about 1 ton 10 cwt.
A cubic yard of Sandstone weighs about 2 tons 5 cwt.
A cubic yard of Trachite weighs about 2 tons 10 cwt.

USEFUL INFORMATION

BRICKS.—About 1,000 bricks, with two bags of lime and one load of sand, are required for an ordinary Cottage Chimney; and 2,000 bricks, 3½ bags of lime and 1½ loads of sand for a Double Chimney. About 1,000 bricks on an average, go to 3½ tons weight.

LIME.—From 15 to 16 bags to 1 ton weight.

CEMENT.—About 3½ cwt. to one cask or barrel.

PLASTER OF PARIS.—Per barrel, weighs about 2¾ cwt.

LATH and PLASTER.—100 square yards require 4 bags of lime, 3 yards of sand, 16 bundles of 4ft. 6in. American laths, 8lbs. 1¼-inch nails, and half bag of hair.

LATHS.—A bundle of 4ft. 6in. American laths covers 6½ square yards; a bundle of 4ft. 6in. ceiling laths covers 5 square yards.

OIL.—Oil weighs about 56lbs. per 5-gallon drum.

PAINT.—One gallon of mixed paint weighs 18 to 20 lbs., and will cover from 40 to 50 square yards with one coat, according to surface; 1lb. mixed paint will cover one square yard, three coats, or 90lbs. to 100 square yards, three coats. Allow 4lbs. mixed paint to every foot run of 11ft. high walls for three coats. Paint materials required for 100 square yards: ½ cwt. white lead, 2 gallons of oil, 1 quart turps., 7lbs. dryers, 3lbs. putty, and colors as desired, for three coats. One gallon of Glassard Oil will cover 50 square yards, two coats, or 2 gallons per 100 square yards, two coats.

NAILS.—1lb. 2-inch brads, 1½lb. 2¼-inch, 2lbs. 2½-inch to every 100 feet of flooring; allow ½lb. 1½-inch nails to every 100 feet of lining; 1lb. of 2-inch nails to every 300 feet of weatherboards.

HOW TO MEASURE SPOUTING, RIDGING and DOWNPIPE.—Spouting: From back to front, inside head. Ridging: From one edge to the other. Downpipe: Actual diameter.

DRILLING GLASS.—Dr. Ryan, chemist, of the Polytechnic Institution, says:—"If a solution of camphor in turpentine be applied to the usual cutting instruments, to moisten, instead of emery or sulphate of copper, glass may be cut and bored just as easily as metals or other substances."

FIREWOOD.—The measurement of a Cord of wood is 4ft. x 4ft. x 8ft.=128 cubic feet.

SUPERFICIAL FEET IN A BOARD OR PLANK

is known by multiplying the length by the breadth by the thickness in inches. If the board be tapering, add the breadth of the two ends together, and take half their sum for the mean breadth and multiply the length by this mean breadth.

British Weights and Measures

AVOIRDUPOIS WEIGHT.

27.344 Grains	equal	1 Dram
16 Drams	,,	1 Ounce (Oz.)
16 Ounces	,,	1 Pound (Lb.)
28 Pounds	,,	1 Quarter (Qr.)
4 Quarters	,,	1 Hundredweight (Cwt.)
20 Cwt. (112 lbs. each)	,,	1 Ton (2240 Lbs.)

The Avoirdupois Pound exceeds Troy in the proportion of 17 to 14 nearly, and the Troy Ounce is greater than the Avoirdupois in the proportion of 79 to 72 nearly.

TROY WEIGHT.

4 Grains	equal	1 Carat
24 Grains	,,	1 Pennyweight (Dwt.)
20 Pennyweights	,,	1 Ounce
12 Ounces	,,	1 Pound
25 Pounds	,,	1 Quarter
100 Pounds	,,	1 Hundredweight
20 Hundredweights	,,	1 Ton of Gold or Silver

By this weight, Gold, Silver, Platinum and Precious Stones (except Diamonds) are weighed. Diamonds and Pearls are weighed by Carats of 4 Grains each (equal only to 3.2 Grains Troy). The Troy Ounce is equal to 151½ Diamond Carats. Gold, when pure, is said to be 24 Carats fine; if it contains one part alloy, it is said to be 23 Carats fine, and so on.

Standard Gold (i.e., Gold of our coinage) is 22 Carats fine. 40lbs. (Troy) of Standard Gold are coined into 1869 Sovereigns.

APOTHECARIES WEIGHT.

20	Grains	equal	1 Scruple	8	Drachms	equal	1 Ounce
3	Scruples	,,	1 Drachm	12	Ounces	,,	1 Pound

The Pound and Ounce are the same as in Troy weight.

APOTHECARIES FLUID MEASURE.

60	Minims	equal	1 Drachm	20	Ounces	equal	1 Pint
8	Drachms	,,	1 Ounce	8	Pints	,,	1 Gallon

There are	437½	Grains in a Fluid Ounce.
,,	4	Drachms in one Tablespoonful.
,,	2	Ounces in one Wineglassful.
,,	3	Ounces in one Teacupful.

GRAIN AND PRODUCE.

	Weight per bushel	Bushels per bag.		Weight per bushel.	Bushels per bag.

60 Minutes	,, 1 Hour	28 Days	,, 1 Lunar Month
24 Hours	,, 1 Day		
(23h. 56m. 4s.	equal 1 Sidereal Day)		
28, 29, 30, or 31 days		equal	1 Calendar Month
12 Calendar Months	}		
52 Weeks	}	,,	1 Year
365¼ Days		,,	1 Common Year
366 Days		,,	1 Leap Year
365d. 5h. 48m. 46s.		,,	1 Tropical Year

ELECTRICAL MEASURE.

The chief units, as generally accepted by Electricians, are as follow:—

Volt—Electromotive force is equal to about 92.6 per cent. of that given by one Daniell's Battery Cell.

Ohm—Resistance equals the resistance offered to the passage of a current of Electricity by a thread of Mercury 106 cm. long and 1 mm. cross-section at the temperature of melting ice.

Ampere—Current equals the current 1 Volt will drive through 1 ohm.

Watt—Power equals 44 ft. lbs. per minute.

Board of Trade Unit—Officially defined as "the energy contained in a current of 1,000 Amperes flowing under an electromotive force of 1 Volt during an hour.

Killowatt equals one Board of Trade Unit. One Board of Trade Unit will keep a 16-candle incandescent lamp alight for about 16 hours.

746 Watts equals 1 horse-power.

METRIC WEIGHTS AND MEASURES.

Lineal Measures.

The unit for length is the Metre.

	Yds.	Ft.	In.		
10 Millimetres or	0	0	0.3937	equal	1 Centimetre
10 Centimetres or	0	0	3.9370	,,	1 Decimetre
10 Decimetres or	1	0	3.3708	,,	1 METRE
10 Metres or	10	2	9.7079	,,	1 Decametre
10 Decametres or	109	1	1.079	,,	1 Hectometre
10 Hectometres or	1093	1	10.79	,,	1 Kilometre

Weight.

The unit for weight is the Gramme.

	Lb.	Oz.	Drams.		
10 Milligrammes or	0	0	0.0056438	equal	1 Centigram.
10 Centigrammes or	0	0	0.056438	equal	1 Decigramme.
10 Decigrammes or	0	0	0.56438	equal	1 Gramme.
10 Grammes or	0	0	5.6438	equal	1 Decagramme.
10 Decagrammes or	0	3	6.438	equal	1 Hectogramme.
10 Hectogrammes or	2	3	4.38	equal	1 Kilogramme.

A Milligramme measures .01543 of a Grain.

BRITISH EQUIVALENTS OF FOREIGN WEIGHTS & MEASURES.

For the purpose of easy and rapid calculations, the following may be regarded as the approximate equivalents:—

LINEAL MEASURE.

1 Millimetre=1/25 of an Inch.
2½ Centimetres = 1 Inch.
1 Metre = 39⅜ Ins. (3ft. 3⅜in.)
1 Kilometre = 5 Furlongs.
1⅜ Kilometre = 1 Mile.

AVOIRDUPOIS MEASURE.

1 Kilogramme = 2½ lbs.
1000 Kilogrammes = 1 ton.

SQUARE MEASURE.

6½ sq. Centimetres=1 sq. in.
1 sq. Metre = 10¾ sq. feet.

BRITISH AND FOREIGN CURRENCY.—Equivalent of £1 Sterling (English). Subject to Daily Fluctuation.

		Exchange-value at 15/8/27	Par.
America	dollars to £1	4.86⅛	4.866
France	francs to £1	124.03	25.225
Belgium	belgas to £1	34.93	35.
Italy	lire to £1	89.30	25.225
Spain	pesetas to £1	28.80	25.225
Switzerland	francs to £1	25.21	25.225
Holland	florins to £1	12.12	12.107
Sweden	kroner to £1	18.12	18.159
Norway	kroner to £1	18.80	18.159
Denmark	kroner to £1	18.14	18.159
Germany	reichsmarks to £1	20.44	20.43
India	pence to rupee	17.984⅜	18.

MENSURATION OF SURFACES AND SOLIDS.

The circumference of a circle = diameter $\times \frac{22}{7}$ (or 3.1416); area of circle = square of the diameter × 0.7854.

The area of a square, rhombus, or rhomboid = base × height.

The area of a triangle = ½ base × perpendicular height.

Area of trapezium = ½ sum of two parallel sides × height.

Area of any right-lined figure of four or more unequal sides is found by dividing it into triangles, finding area of each, and adding together.

For any regular polygon, inscribe a circle; then ½ radius of that circle × length of one side × number of sides = area.

The area of a parabola = base × height × 2/3rds.

The area of an ellipse = long axis × short axis × 0.7854.

Surface and cubic content of prism or cylinder—1st (area of two ends) + (length × perimeter) = surface; 2nd, area of base × height = content.

For a cone or pyramid—1st, ½ (slant height × perimeter of base) × area of base = surface; 2nd, 1/3rd (area of base × perpendicular height) = content.

For a cube or parallelepipedon—1st, sum of areas of all the sides = surface; 2nd, length × breadth × depth = content.

For a sphere—1st, square of diameter × 3.1416 = surface; 2nd, cube of diameter × 0.5236 = content.

Area of sector of circle = length of arc × ½ radius.

Area of segment of circle = area of sector, less area of triangle.

Side of square of area equal circle = diameter × 0.8852.

Diameter of circle equal in area to square = side × 1.1284.

COMMONWEALTH POSTAL RATES

PRINCIPAL POST OFFICE CHARGES.

All-Steel Railway Carriages and Waggons

IN all the progressive countries of the World it is becoming increasingly noticeable that the Railway Authorities are building new rolling stock entirely of steel.

Every collision or accident points to the fact that Wooden Railway Carriages are most dangerous to passengers, from the point of view of splintering and their liability to ignite, and it has been proved in accidents that passengers have a better chance of escape from injury or death in all-steel vehicles than in the old-fashioned wooden carriages.

For years past, **John Lysaght Limited, of Bristol (Eng.)** have specialized in the manufacture of steel panelling for carriages, and steel sheeting for waggons, all qualities being prepared dead flat, square, and exact to any specified size.

There are different qualities for the varying purposes and conditions, and particulars of these qualities can always be obtained from **John Lysaght (Aust.), Ltd.,** in the State Capitals of the Commonwealth.

Thousands of tons of such panels are in use in different countries (England, India, China, South America, Ceylon, Burma, &c., &c.), and are giving the very greatest satisfaction; and in nearly every instance Goods Trucks are roofed with **LYSAGHT'S CORRUGATED "ORB" IRON.**

"777" (Three Sevens)	7%	7%	—
"Howes"	9%	11%	—

Cabbage-growers who wish to mix Bonedust with one of the above should use No. 6.

The materials used for the above mixtures are Superphosphate, Sulphate of Ammonia, and Sulphate of Potash. Quotations given for buyers' own mixture in lots of 1 ton or more—not less.

Analysis of Fertilizers for different purposes, reprinted from pamphlet issued by Australian Fertilizers Pty., Ltd.

Phosph. Acid Citrate Soluble	Phosph. Acid Insoluble	Gypsum Lime Sulphate	Crops for which Fertilizers are intended under average conditions.
.5%	1%	40%	Wheat and Oats for Grain, Pastures, also Lucerne in soils rich in Potash.
17%	.5%	33%	Substitute for Super, in wet, sour soils.
.15%	.41%	20%	Wheaten and Oaten Hay, Turnips, Maize, Rape, Cotton.
10%	.5%	30%	Maize (poor soils), Cabbages, Cauliflowers, etc., etc.
.12%	.33%	15%	Green Fodder (not Lucerne), Flowers, Shrubs.
.15%	.41%	19%	Potatoes, Tomatoes, Citrus Fruits, Apples, Pears, Passions, Grapes, and Tobacco on poor soils.
.15%	.41%	19%	Stone Fruits, Strawberries, Sugar Cane, Onions, and Tobacco on good soils.
.16%	.45%	21%	Melons, Pumpkins, etc. Lawns. Also substitute for No. 4 for soils rich in potash.
.18%	.5%	23%	Lucerne, Peas, Beans, etc., on soils deficient in potash.
6%	.3%	20%	Peas, Beans, Lucerne & Green Manure Crops on soils deficient in lime.
5%	.25%	18%	Bananas.
7%	.1%	12%	Sugar Cane.
6%	.1%	11%	Special for Sugar Cane.

Bonedust, Blood and Bone, Bone and Super., Nitrate of Soda, Sulphate of Ammonia, Sulphate of Potash, etc., also supplied.

BROADCASTING

Australian Wireless Regulations

Wireless broadcasting is carried on in Australia, and is controlled by regulations gazetted under the Wireless Telegraphy Act 1905-1919, dated 17th day of July, 1924.

The broadcasting stations are conducted by private enterprise under license from the Commonwealth Government, provision being made for the granting of licenses enabling two classes of stations, "A" and "B" class, to operate. The former share in the revenue collected from license fees, while the latter do not receive any revenue.

The number of "A" class stations is limited to two in New South Wales, two in Victoria, and one in each of the other States.

Any person wishing to listen-in to a broadcast programme need only obtain a Broadcast Listener's License from any Post Office, and is then at liberty to tune in to the whole of the stations to which his set will respond. He may use any type of receiver, and may utilise any circuit, provided, of course, that by mishandling a receiver, he does not cause a disturbance in the ether surrounding his station, and so interfere with others who may be listening in.

The fees payable for licenses vary according to the district in which the prospective listener resides.

Each State is divided into zones as follows:—

Queensland, New South Wales, Victoria, and South Australia.

Zone 1.—The territory between the coastline approximately 250 miles north of Brisbane and 250 miles west of Adelaide, and a line running about 250 miles from the coast, with such local variations as it is expedient to introduce.

Zone 2.—The contiguous territory reaching about 150 miles further beyond Zone 1.

Zone 3.—The remaining territory in those States.

West Australia and Tasmania.

Zone 1.—The territory of the State embraced by a circle of approximately 250 miles' radius drawn from the centre of the town or city in which the broadcasting station is erected.

Zone 2.—Between the 250-mile circle and another concentric circle of approximately 400 miles' radius.

Zone 3.—The rest of the State outside the 400-mile boundary.

Three classes of licenses are issued—ordinary, temporary and special licenses.

An ordinary license is one which enables a person to operate a receiver in his own home or for his own use.

A temporary license is issued where temporary use of a receiver is required, such as at demonstrations in public, etc.

A special license is issued for use in hotels, restaurants, places of amusement, or other places where the reception is intended for public use.

FEES.

The fees which are payable for receiving licenses are as follows:—

Class of License.	Fees payable to Zone in which the Licensed Station is to be operated. (For definition of Zone see Regulation 83.)		
	Zone 1.	Zone 2	Zone 3
Ordinary License	27/6 per an.	22/6 per an.	17/6 per an.
Special License	£10 per an.	£9 per an.	£7/10 per an.
Temporary License	£1 per week	17/6 per week	15/- per week

STATIONS OPERATING.

DIRECT WIRELESS SERVICE

Between Australia and England

Work is now proceeding speedily and satisfactorily in connection with the construction of the Australian Beam Wireless Stations.

After careful investigation and experiment, the Beam Station sites were selected in the south-eastern portion of Australia.

At Ballan, 50 miles from Melbourne, a large beam transmitting station has been built; at Rockbank, 15 miles from Melbourne, a receiving station is nearing completion, at which the energy of the wireless beams from England and Canada will be collected and concentrated, and from there conveyed over a land wire into the city of Melbourne.

The two sites are 25 miles apart, sufficiently distant for technical purposes, i.e., to permit duplex working, but easily accessible for management.

Each transmitting and receiving station will have three masts 650 feet apart and 250 feet high. They have been constructed of lattice steel and each weighs 50 tons. In all 12 masts will be used for the four stations, the total weight being 600 tons.

The actual time of transmission between England and Australia of a wireless signal under the Beam System is approximately one-eighteenth of a second. The operating capacity of the entire system will range from 80 words a minute to at least 400 words a minute, because it will be possible to handle four messages simultaneously by two stations receiving and two transmitting.

With improvements that are now being tested, there are good prospects that this speed in any single direction will go up to 200 words a minute.

As in other countries, the transmission and reception will actually be operated from Central city offices by distant control—the work at the transmitting and receiving station will be automatic only.

One station will be capable of sending a concentrated beam of wireless energy direct to London over the north-western great circle or the south-eastern great circle at will; if this beam were sent in both directions simultaneously, it would form a sort of wireless ribbon completely encircling the earth. The other station will send a concentrated beam of wireless energy direct from Australia across the Pacific Ocean, over the whole of Canada, into a station near Montreal.

High speed automatic telegraph equipment will be installed at the Company's Melbourne office, and there the operators will work over the Beam System direct to London and Montreal, and also to the feeder stations in the other capital cities of Australia.

"Feeder" Stations will be established in each of the other capital cities communicating direct with the main trunk station, and as the relay will be automatic, there should be little delay compared with the handling of messages originating in Melbourne itself. As the system develops, there will probably be additional feeder stations linking up other parts of Australia more efficiently and speedily.

Rates for Beam Wireless messages for ordinary, deferred, and week-end traffic and any information required either on the Beam System or Wireless problems generally, will be gladly supplied by the offices or agencies of Amalgamated Wireless (A/asia) Limited. in the principal cities of the Commonwealth.

The following Appendix (for which the Publisher accepts no responsibility) has been compiled from standard sources of information, and will, it is hoped, prove of value to residents in country districts who may be remote from medical aid.

First Aid to the Injured

Country residents desirous of forming a First-Aid Class in their district are invited to correspond with the Secretary, St. John's Ambulance Brigade, in the Capital City of the State in which they are resident.

LYSAGHT'S "ORB" is a Perfect Roofing Sheet.

WOUNDS.

Bleeding from Arteries.

Head.—Pad and bandage the wound.

Neck.—Place thumb in wound and press backward against spine.

ARMPIT.—Press thumb into wound, second person to press main artery behind middle of collar bone.

UPPER AND FOREARM.—Press with fingers, or apply tourniquet to inside of upper arm where pulsating. When below elbow, place pad in hollow or bend of elbow, and bend forearm against upper arm.

PALM OF HAND.—Bandage hand, closed over a piece of stick, or press arteries at front of wrist.

THIGH.—Hand pressure at centre of fold of groin, or by tourniquet on inside of thigh.

HAM OR BACK OF KNEE-JOINT.—Same as for a thigh, or press by hand or tourniquet in ham above wound.

FRONT OR BACK OF LEG.—Press by hand or tourniquet at back of knee-joint, or double the leg up against a pad placed in the ham.

A tourniquet can be made by placing a stone over the main artery, tieing a handkerchief loosely over it, and then twisting it tight with a stick.

Blood from an artery is bright red and flows in jets.
Blood from a vein is dark bluish, and flows slowly.
The flow of arteries is from heart to head, hands to feet.
The flow in veins is just the reverse.

INSTEP.—Pressure to the middle of front of ankle.

SOLE OF FOOT.—Bandage with pads behind inner ankle bones and middle of instep.

FOR ALL SITUATIONS.—Elevate the part and apply pad and bandages.

FLESH WOUNDS.—Wash, stop bleeding, fix parts in natural position without delay.

GUNSHOT WOUNDS OF CHEST OR BELLY.—Place patient on wounded side with knees drawn up; give complete rest; no stimulants.

BRUISED WOUNDS.—Wash, apply wet cloths; if about head, poultices.

SPECIAL NOTE.—VALUE OF IODINE AS A FIRST-AID DRESSING.—It is stated that, in the Franco-Prussian War, out of every 100 men wounded and operated upon, 75 died of blood-poisoning. In the South African War and in the Russo-Japanese War, only 2 per cent. died from this cause. The explanation of this marvellous improvement is cleanliness. In the interven ing period Scientists had discovered that an immediate application of Iodine to the wound removed all danger of septicaemia or blood-poisoning, so that unless a vital part was struck, the chances of recovery were greatly enhanced. Special phials of Iodine are now prepared, and the method of application is to break off the end of the phial, pour a little Iodine in and about the wound, and on the pad of lint, binding it closely together with a bandage.

BROKEN BONES.

LOWER JAW.—Bandage the lower to upper jaw with handkerchief.

COLLAR BONE.—Place pad in armpit, bandage elbow to side, sling forearm.

RIBS.—Apply bandage 6 inches wide, 8 yards long, round chest.

UPPER ARM.—Bend arm and apply roller bandage to hand and forearm, splints to back and front, and sling forearm.

FOREARM.—Apply padded splints to back and front from hand to elbow, holding the arm extended with thumb pointing upwards.

HAND.—Apply splint bandage, and support in sling.

THIGH.—Apply a long splint from armpit to outside of heel, and short one from fork to knee on inside, and bandage.

LEG.—Apply splints inside and outside and bandage.

STRETCHER DRILL.

1. Three men fall in, facing feet of injured man, and are numbered off from the right.
2. Place foot of stretcher at patient's head in a line continuous with the body.
3. Nos. 1 and 2 one at either side—locking hands underneath the shoulders and hips, raise the patient, carry him forward over the stretcher, and then lower him on it.
4. No. 3 takes charge of the injured portion (limb or head) and steadies it with a hand on either side of the wound.
5. Nos. 1 and 2 then take their places at the head and foot of the stretcher, lift, and carry off, while No. 3 walks at side of stretcher.

SIGNS OF BROKEN BONES.

Motion at the part; crackling sensation on moving broken ends; alteration in shape; often shortening. Always apply splints before lifting or carrying. Dangers are of pushing the end through flesh, blood vessels, nerves, or internal organs (lungs).

Splints may be formed of soldiers' weapons—rifles, swords and scabbards—umbrellas, walking-sticks, broom handles, folded newspapers, etc. Bandages from handkerchiefs, sheets and shirts. Stretchers from doors, ladders, or two rifles and a blanket.

GENERAL.

AGUE.—As a preventive, give five grains of quinine every morning. As a cure, act on the bowels, give ten grains of quinine three times a day, and a vapour bath every evening.

APPENDICITIS.—Pain and tenderness in lower right front of abdomen, often beginning in pit of stomach, accompanied at times by vomiting and fever. For temporary relief, apply hot fomentations. No purgatives. Slight sips of water may be taken. Await medical advice.

APOPLEXY.—Act on the bowels, apply wet cloths to the head, undo collar.

BITES.—Of snakes, mad dogs: Apply a ligature (a cord) on the side nearest the heart; suck the wound, scratch the edges with a penknife, and apply caustic or carbolic acid to the wound.

BURNS.—Place the part in a natural position, and apply cloths soaked in oil.

COLIC AND DIARRHOEA.—Give 20 drops of chlorodyne in a little brandy and water.

DYSENTERY.—A small teaspoonful of Ipecacuanha, and a powder every two hours.

DELIRIUM TREMENS.—Act on the bowels, beef-tea every half-hour, 20 grains of chloral in water as a sleeping draught.

DROWNING.—Also for Mild Asphyxiation, Electric Shock, etc. (Supplied by the Royal Life-Saving Society, N.S.W. Head Centre).—SEND FOR MEDICAL ASSISTANCE, IF POSSIBLE. Place the patient face downward, with left side of the face resting on the ground or floor. If no blanket or mat available, put a piece of paper under the face near mouth and nose. Examine the mouth for, and remove any foreign substance. Extend the arms sideways and upwards. Kneel beside and close to the thighs, place the hands just above the small of the back, little finger on lowest rib, others spread out, thumbs an inch apart parallel to one another and pointing to the head. Carry the body steadily forward until its weight is on both hands, thus compressing the patient's body towards the floor, then carry the body back again, releasing the pressure, but not removing the hands. Continue the movement fifteen times to the minute, or once every four seconds for an hour or two, or until the patient starts to breathe. Then remove any wet clothing, cover with blankets, and apply warmth by rubbing the body and insides of limbs, always towards the heart. Place hot-water bottles or bricks to soles of feet, inside thighs or armpits. Watch carefully for any cessation of breathing, and if such occur proceed as before.

EMETICS.—Substances which cause vomiting. A tablespoonful of salt, or mustard and water, an ounce of Ipecacuanha wine; 15 grains of sulphate of zinc in water.

FAINTING.—From loss of blood, weakness, or shock. Keep the body in the lying position, undo the dress, give plenty of air, sprinkle the face and chest with cold water; smelling salts to nostrils.

FITS.—Loosen the clothing about the neck; fresh air, and prevent patient from injuring himself.

MENINGITIS.—Violent headache, unusual irritability or drowsiness, frequent vomiting, tendency to curl up in bed on side, resisting interference, feverish tendencies. Keep in dark room until doctor comes.

POISONS.—1. Give an emetic in the case of poisons which do not stain the mouth, such as Arsenic, Phosphorus, Strychnine, Prussic Acid, Belladonna, and also in the case of Ptomaine Poisoning, Alcoholic Poisoning, Opium, Morphia, Laudanum, Paregoric, Chlorodyne, Syrup of Poppies, etc. (See Emetics above.)

provide employment for Australian Workmen.

2. DO NOT give an emetic for the following poisons, which burn or stain the mouth, viz.—

(a) Acids, i.e., Nitric Acid, Sulphuric Acid, Hydrochloric Acid, Muriatic Acid (Spirits of Salt), Carbolic Acid, Oxalic Acid, etc.

(b) Alkalies, i.e., Caustic Potash, Caustic Soda, and Ammonia, etc.

TREATMENT—

(a) Acid Poisoning: Give an alkali, i.e., Lime Water, Magnesia, Chalk, Whiting (and soda, except in the case of Oxalic Acid poisoning); also Oil (Olive, Salad, Cod Liver or Castor).

(b) Alkali Poisoning: Give an acid, i.e., Lemon Juice or Vinegar, diluted with an equal quantity of water, also Oil (Olive, Salad, Cod Liver or Castor).

NOTE.—STRONG TEA is a direct neutralizer of many poisons, and is always safe to take.

RHEUMATISM.—This painful malady is generally due to errors of diet or other causes, such as damp ground, wet clothes, or excess of alcohol, and before any cure can be attempted the cause must first be removed. TREATMENT—any good saline preparation, mineral water, etc., while for external application Eucalyptus or other warming and stimulating embrocation will be found to give good results.

RUPTURE.—The escape of a portion of the bowel from the belly at the groin. To return it, place the patient on his back, with the knees drawn up, and apply pressure to the swelling in an upward and outward direction.

SORE FEET.—Anoint with oil or soap before marching, and harden the skin at night by washing with salt and water, or spirits.

SCALDS.—Smear with a solution of lime oil, and envelop in cotton wool.

SPRAINS.—Elevate and rest limbs, apply cold water cloths.

SUNSTROKE.—Loosen dress at neck, act on bowels, cold water at head.

Tank Makers should specify LYSAGHT'S "ORB" Brand Corrugated Iron—it will stand any and every possible test in curving or otherwise, being almost as tough as copper. It is obtainable up to 12 feet in length.
